Conversion between metric and standard units can be tricky since the units of distance, volume, area and temperature can seem rather arbitrary when compared to one another. Although the metric system (using SI units) is the standard system of measure in most parts of the world many countries still use at least some of their traditional units of measure.

Metric measurements. A meter has been officially defined to be the distance traveled by light in a vacuum in  $1/299,792,458$  second. All other length and distance measurements in the metric system derive from the meter (eg.  $\text{km} = 1000\text{m}$ ,  $1\text{m} = 1000\text{mm}$ ). Imperial / American measurements. These measurements have a less logical progression.
